## TOU-TANG INDUSTRIAL COMPLEX, CHINA

25X1D

1. A second major iron and steel complex is under construction in southwest China, as observed on a re-analysis of [REDACTED]. This is the earliest photography on which this installation could be identified. The complex is at Tou-tang, 150 nautical miles (nm) northeast of Kunming and 160 nm east of the Jen-ho-chieh Industrial Complex (Figure 1), the other major iron and steel complex in southwest China.

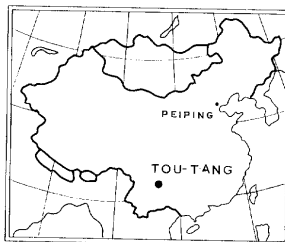

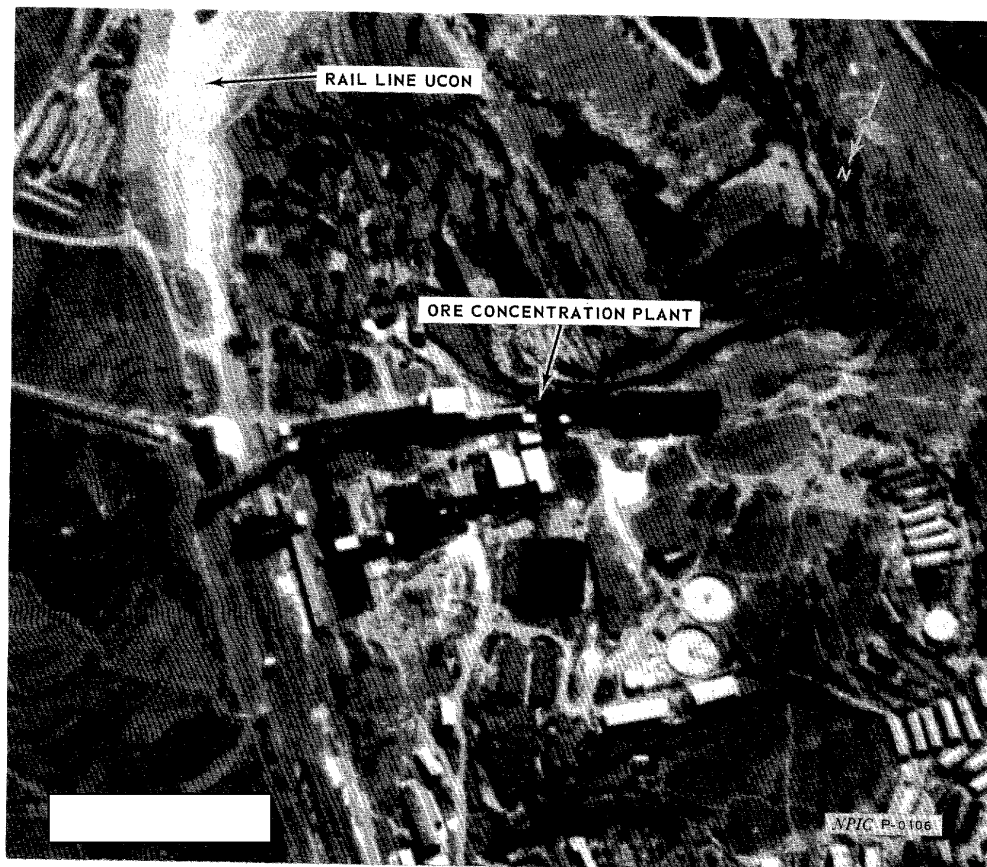

FIGURE 1. LOCATION MAP

2. The Tou-tang Industrial Complex consists of four major areas: two ore concentration plants (one under construction), an iron and steel production area (under construction), and a mining area.

25X1A

3. An ore concentration plant, located at 26-41-50N 104-47-50E and consisting of crushing and sorting buildings, two dewaterers, a conveyer system, and a railcar-loading facility, was observed in a late stage of construction (Figure 2). A rail spur was being built from the main line at 26-33N 104-55E to the plant. A large worker housing area was seen immediately north of the plant and two other large housing areas, probably associated with mining, were on the east edge of the plant and 2 nm west-southwest, respectively. This area is the Lo-ping Mining Complex [REDACTED].

4. An iron and steel production area under construction at 26-35-30N 104-53-00E consisted of a blast furnace with hot stoves, a casting shed, a boiler/blower house, a coke oven battery, a coke by-products area and a coal-handling facility, all in various stages of construction (Figure 3). Five major industrial buildings, two rail yards, and numerous worker housing units were also located in this area.

5. An operating ore concentration plant consisting of crushing and sorting buildings, two dewaterers, a railcar-loading facility, and a small rail yard was observed at 26-33-35N 104-57-40E (Figure 4). A shaft mine was connected to the plant by a conveyor system.

6. A shaft mine with railcar-loading facilities was located at 26-31-00N 104-59-30E. Two large housing areas, probably associated with mining, were southeast of this area.
